

# Solidus Technologies, Inc.

*Engineering Design & Manufacturing*

Solidus Technologies, Inc. is a visionary MEMS product development company offering a diverse portfolio of MEMS Test equipment, Manufacturing and Engineering services.

We are driven by our continual call to excellence and years of MEMS manufacturing experience in the automotive sector. We provide our customers with a cost effective solution and can partner with them to complete their design and test of new products to increase the success of their business. We accomplish this by using our dedicated team of employees, intellectual assets, and test equipment that we have interwoven into a full-spectrum test- and development environment. An open architecture has been developed for our test equipment products which provides the customer with flexibility, control and reduced time to market.

Our offering includes a MEMS test product family and a diverse portfolio of engineering and manufacturing services. Solidus Technologies, Inc. provides turn-key solutions, systems integration and ATE systems. Our objective is to be *your* key partner for success.
